(57) Abstract:

PURPOSE: To automatically update frequencies of different broadcast stations of program networks corresponding to respective preset keys to frequencies of other broadcast stations of respective networks at the time of switching to the radio mode from another mode.

CONSTITUTION: When the radio mode is switched to the tape mode by a tape key 12b of an operation part 12, a broadcast station other than an RDS station which receives on the radio mode is automatically switched to the RDS station higher in the reception electric field strength by a system control part 14c of a controller 14 and receive. When the strength of the reception electric field of the RDS station is equal to a prescribed level or lower, the preset broadcast station of a preset key 12c of the operation part is updated to another broadcast station of the program network based on prescribed data of another program network by a data register update part 14b.
